# **Dicolor Die-Aluminium rental screen**

Presentation & introduction

## Catalogue

- Product advantage
- Product structure
- System topological graph
- Hoisting rental screen
- Assembling rental screen
- Rental accessories
- Application cases

What is exactly the advantage of Die-aluminium cabinet?

Weakness of common cabinet	Advantage of die - aluminium cabinet
High weight, big volume, high cost for transportation	Cabinet is light and thin , only 48kg/m²
Heavy cabinet make hard the transport and installation	Cabinet weight is 12.5Kg/PCS
Thick outer package	Packed by flight case , 6PCS/cabinet,much room saved
Low installing efficiency	Fast assembling structure , finished by one stuff , 10S/PCS
Lots of tools needed while installing	100 % assembled by hands , without any tools .
Flatness, boundary effect is hard to control	Shaped by dying, tight connectors , flatness is within 0.2mm
Emergency disposal is not easy	Any cabinet within the screen is free of assembling and disassembling

### Product advantage introduction

- **Light**: Cabinet size 512mm×512mm, just12.5kg in weight comparing to 25 kgs of common cabinet
- **Thin**: It is Die-aluminium cabinet, thus it is featured by high strength and toughness and precision and hard to be deformed. it is 87mm in thickness as a whole and the thinnest point is just 36mm comparing to the 160mm of common cabinet.
- **Fast**: There is fast locking device in the four corners, It takes only 10 second to assemble one cabinet by pushing the handle 90 degrees, up, down, left and right it is really fast and precise assembling
- **Easy**: The cabinet is modular designed, , any cabinet of the screen is free of assembling and disassembling.
- **Compatible**: New structure design satisfy the hoisting assembling and pile-up assembling .P4、P5.33、P6.4、P8、P10.66、P12.8、P16 modules are compatible with each other .
- Low: Excellent heat dissipation design, no fans and air conditioning are required.

# Product advantage introduction

### **Light and thin**

• 12.5Kg/PCS , 48Kg/sqm

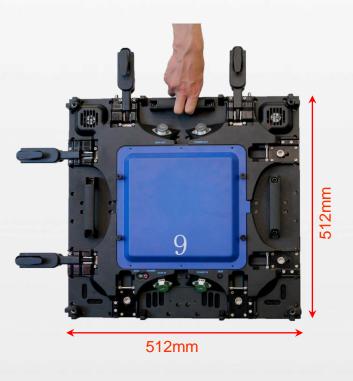

• cabinet size: 512mm×512mm=0.26 m<sup>2</sup>

• module size: 256mm×256mm

• cabinet thickness: 87mm best of all is 36mm

# Product advantage introduction

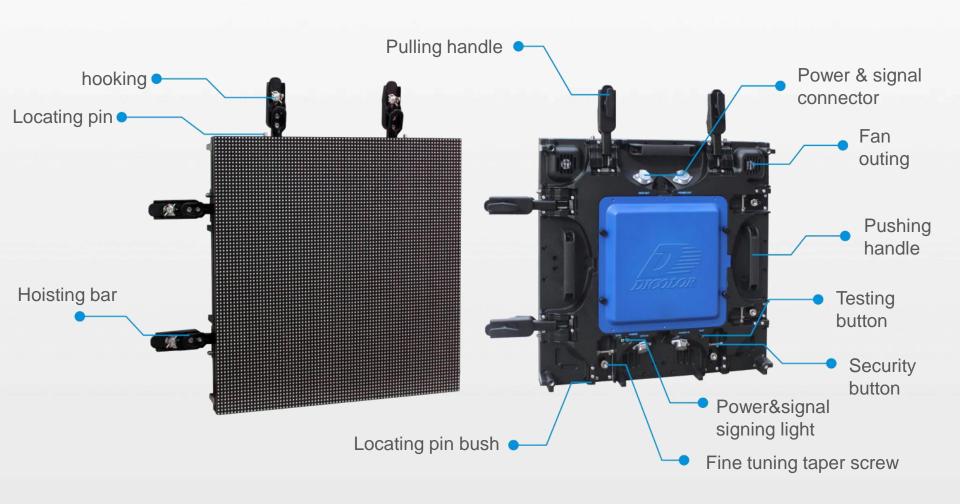

Cabinets of the screen is free of assembling and disassembling

# Sheet for compatible pixels

Pixel/mm	Module size/mm	Module resolution	Pixel density/m²	Scanning	Brightness/m²	Application
4	256×256	64×64	62500	1/8	1500	indoor
5.33	256×256	48×48	35200	1/8	1600	indoor
6.4	256×256	40×40	24414	1/8	1800	indoor
10.66	256×256	24×24	8800	1/4	6000	outdoor
12.8	256×256	20×20	6103	1/4	4500	outdoor
16	256×256	16×16	3906	static	6000	outdoor

### **Cabinet structure**

## Cabinet accessories introduction

Items	Function		
hooking	Connecting the security button		
Pulling handle	Locking and unlocking the relative connector		
Hoisting bar	Core connector, connected with Fine tuning taper screw		
Locating pin	For locating the position while assembling		
Locating pin bush	Gnawing together with Locating pin		
Fan outing	Fans' dissipation		
Testing button	Testing the power		
Pushing handle	Make the carrying of cabinet easy		
Fine tuning taper	Closely connected with the hoisting bar ,adjusting the assembling		
screw	flatness		
Security button	Locking the connectors		
Power & signal connector	Connecting the power and signal cables		
Power & signal signing light	Show Working status		

#### **Aviation socket**

Don't connect these two connectcors by heavy force.

**Power aviation socket** 

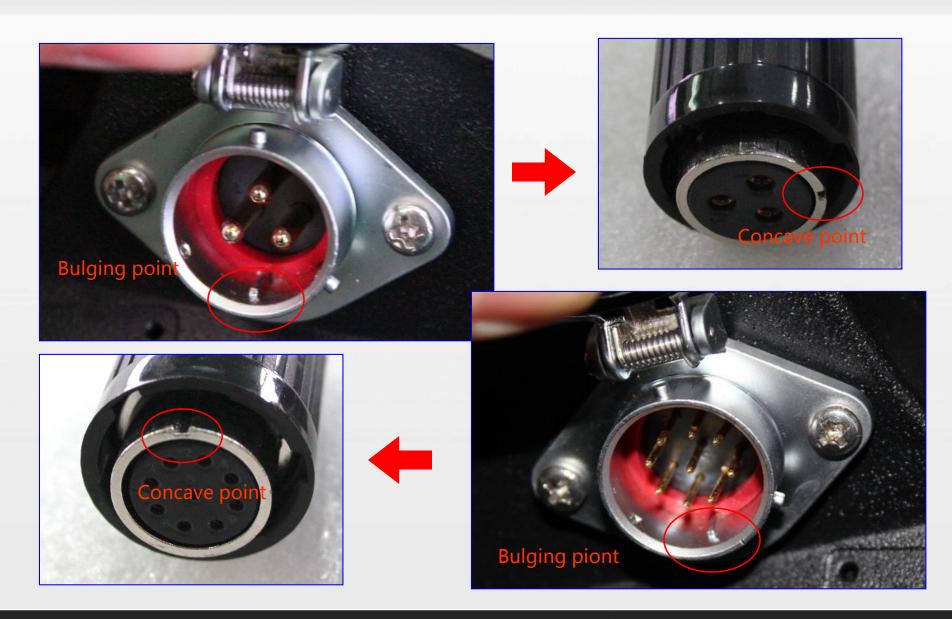

**Signal aviation socket** 

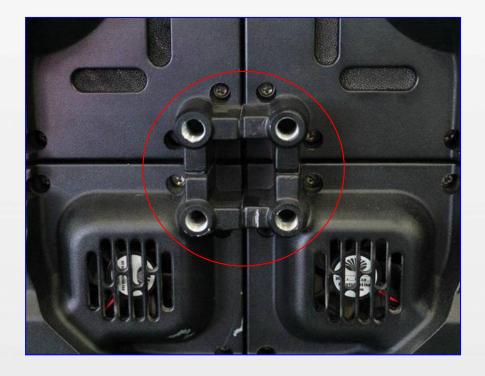

### **Materials for connecting the cabinets**

Starting from the left: 9pin long aviation signal cable,3 pin aviation power cable. 9pin aviation signal cable

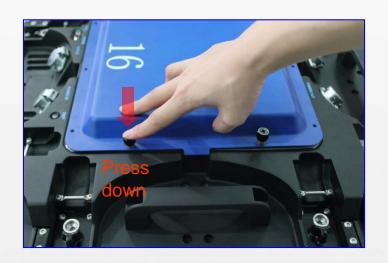

### Fixing screw hole site

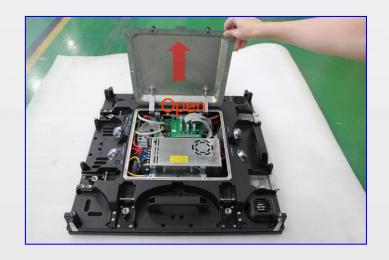

For big size screen project , we need to connect the screen to the backside supporting structure through this screw hole site.

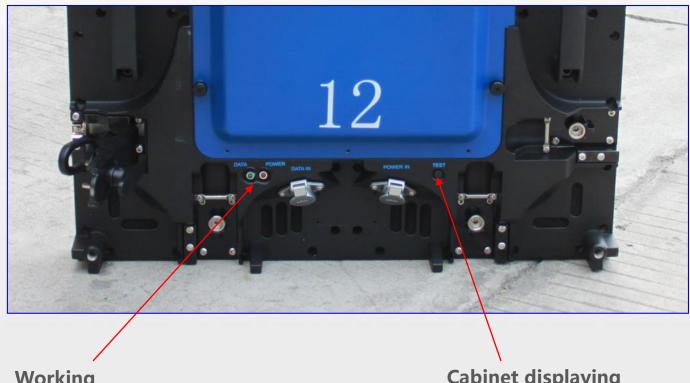

### **Maintaining within the cabinet**

In case something is wrong with the cabinet, loose the 4 screws by hands.

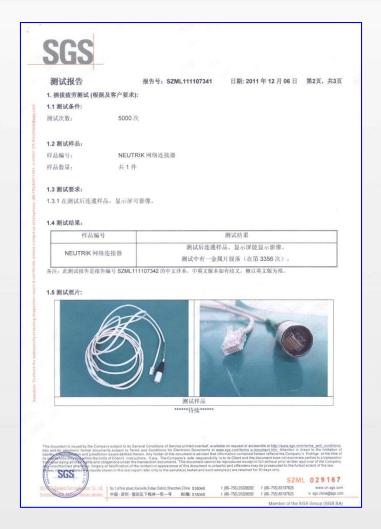

Working

Green light fliker show the signal is well Red light flicker shows the power is well

**Cabinet displaying** 

Press "Testing" button to check the cabinet working.

## Product testing report---quality guaranteed

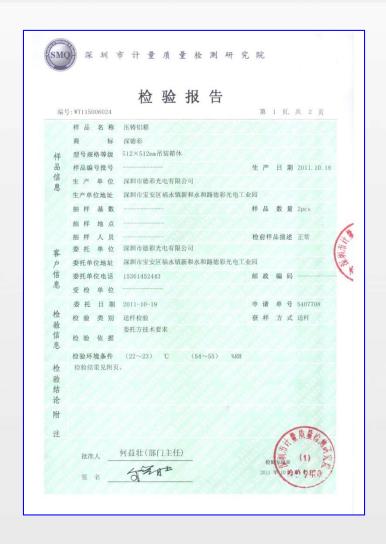

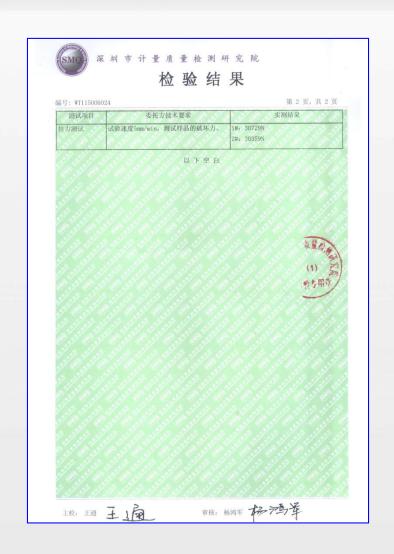

NEUTRIK signal connector testing

NEUTRIK power connector testing

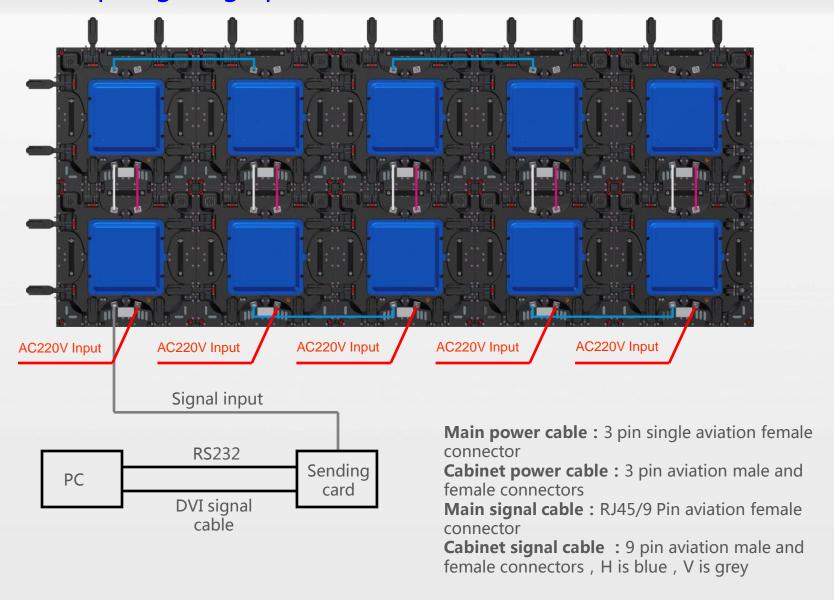

### Product testing report---quality guaranteed

Tensile force testing report

### System topological graph

### 1. Build the girder

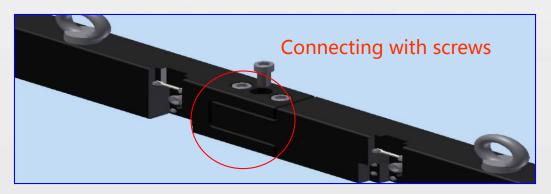

Build the girder with required height and width.

### 2. Connect the hoisting grain

Connecting the hoisting grains with screws

# 3. connect the girder and hoisting grain

Use motor hoist to adjust the height

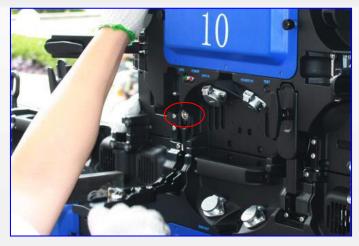

# 4. the connection between fist line of cabinets and hoisting grain

The same as the next step 5.

#### 5. Up and down connecting ...

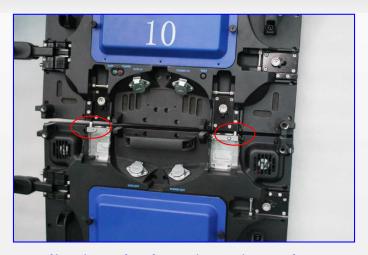

See the following graph:

A. Hole site of hoisting bar match the taper screw of the above line of cabinet.

C. Rotate the connecting bar clockwise, press frontward to hook up the security button .then loose your hand.

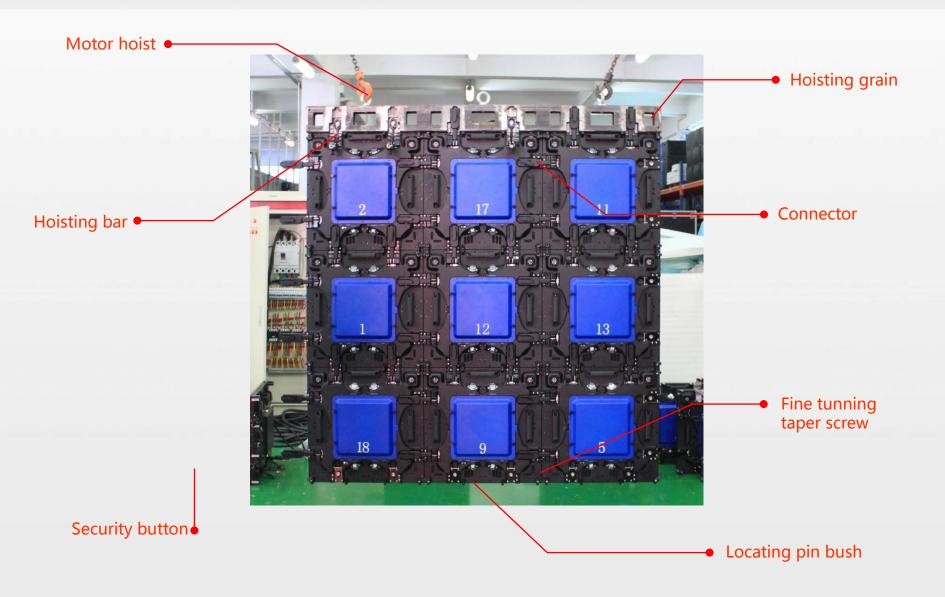

B. Aligning the locating pin and locating hole.

D. After fixing the up and down ,then comes to the left and right . Then comes to the assembling of next cabinet.

## The screen effect as a whole

#### 1, set up the U bar

Set up the U bar on the ground , adjust to the same height.

Connecting brace fix the cabinet on the steel frame.

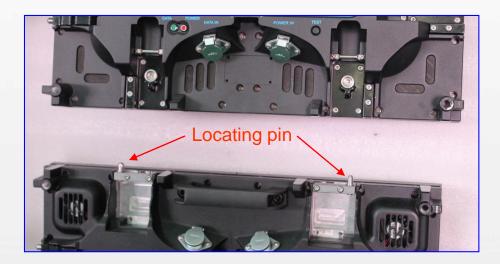

Connecting brace

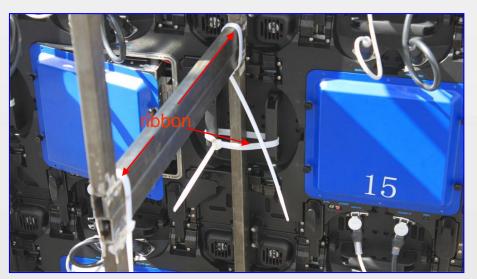

### 3. up and down connecting

Use locating pin to connect.

### 4. steel frame connecting

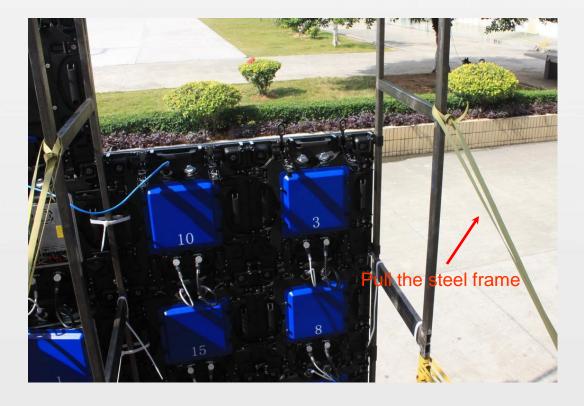

Use locating pin to connect the steel frame ,fastened with ribbon.

### 5, full screen assembling

The assembling of cabinets ,please see the step 24 above.

Use steel rope to pull the steel frame when each 2 lines cabinets are assembled, in case of falling frontward.

# Assembling rental screen effect as a whole

### Notes for both Hoisting and assembling rental screens

#### **Notes while assembling**

- Cabinets cant be dislocated, adjust the flatness to be within 0.2mm.
- Control the gap between cabinets, adjust the taper screw as the following picture.

# Accessories for rental screen

## Accessory——Hooking tackle block

Hooking tackle block ,also named motor hoist ,both hand-operated and electrical – operated versions available ,it is composed of a few fixed and movable tackle ,they will make the screen assembling much more efficient and convenient.

## Accessory—Hoisting grain and ground grain

Hoisting grain--- for hoisting the screen , there are two specifications:

A. 2 cabinets (512mm×2)

B. 3 cabinets ( 512mm×3 )

Ground grain- for assembling the screen there are two specifications:

A. 2 cabinets (512mm×2)

B. 3 cabinets (512mm×3)

# Accessory—Girder

For hoisting and supporting the screen body, it is a necessity for hoisting rental screen.

# Accessory—steel frame

For supporting the screen body in case the screen fall frontward under gravity, single steel frame is 2 times higher than single.

Cabinet 512mm×3=1536mm

### Accessory—portable power distribution cabinet

Portable power distribution is designed to distribute the power to each loading unit , it will offer power-off protection when short circuit ,overloading and leakage of electricity happen. It is power supply for LED screen body ,with AC380V input and AC 220V output, air-switch control, together with power indicating light.

## Accessory—mobile equipment cabinet

Mobile equipment cabinet integrate various video and voice equipment. Its lightness and flexibility enable itself to be used for rental purpose.

# Accessory——Flight case

One flight case can hold 6 cabinets. With excellent and practical up-cover design .

## **Application case**

Opening ceremony of the 14th Shantou acoustics exhibition in 2012

# Thanks for your time
